This data sheet is a summary of the specifications and conditions for N9041B UXA signal analyzers.

Definitions and Conditions

Specifications describe the performance of parameters covered by the product warranty and apply to room temperature range 20 to 30 °C, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx. 2 σ) of performance tolerances expected to be met in 95 percent of the cases, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but is not covered by the product warranty.

The analyzer will meet its specifications when:

- The analyzer is within its calibration cycle.
- Under auto couple control, except that Auto Sweep Time Rules = Accy.
- The analyzer has been stored at an ambient temperature within the allowed operating
 range for at least two hours before being turned on, if it had previously been stored at a
 temperature range inside the allowed storage range but outside the allowed operating range.
- The analyzer has been turned on at least 30 minutes with Auto Align set to Normal, or if Auto Align is set to Off or Partial, alignments must have been run recently enough to prevent an Alert message. If the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user. If Auto Align is set to Light, performance is not warranted, and nominal performance will degrade to become a factor of 1.4 wider for any specification subject to alignment, such as amplitude tolerances.
- The term "mixer level" is used as a condition for many specifications in this document. This term is a conceptual quantity that is defined as follows: Mixer Level (dBm) = RF Input Power Level (dBm) (Electronic + Mechanical) Attenuation (dBm)
- The term "attenuation" is used for many specifications in this document. The statement about Attenuation setting refer to the Mechanical Attenuator, unless otherwise stated.

Frequency and Time Specifications

Frequency Range		Input 1	Input 2
Option 590		2 Hz to 50 GHz	2 Hz to 90 GHz ¹
Option 5CX		2 Hz to 50 GHz	2 Hz to 110 GHz
Frequency Band	LO Multiple (N)	Frequency Range	Additional Information
0	1	2 Hz to 3.6 GHz	
1	1	3.5 to 8.4 GHz	
2	2	8.3 to 13.6 GHz	
3	2	13.5 to 17.1 GHz	
4	4	17 to 26.5 GHz	
5	4	26.4 to 34.5 GHz	
6	8	34.4 to 50 GHz	
7	8/12	49.9 to 75 GHz	For Input 2 only
8	12/16	74.9 to 110 GHz	For Input 2 only
Frequency Reference			
Accuracy	± [(time since last adjustr	nent x aging rate) + temperature sta	bility + calibration accuracy]
Aging rate	± 3 x 10 ⁻⁸ / year		
Temperature stability Full temperature range	± 4.5 x 10 ⁻⁹		
Achievable initial calibration accuracy	± 3.1 x 10 ⁻⁸		
Example frequency reference accuracy 1 year after last adjustment	$= \pm (3 \times 10^{-8} + 4.5 \times 10^{-9})$ $= \pm 6.6 \times 10^{-8}$	+ 3.1 x 10 ⁻⁸)	
Residual FM (Center frequency = 1 GHz 10 Hz RBW, 10 Hz VBW)	≤ (0.25 Hz x N) p-p in 20 See band table above for		
Frequency Readout Accuracy (Start, Stop, Ce	nter, Marker)		
± (marker frequency x frequency reference acc		BW + 2 Hz + 0.5 x horizontal resolut	tion ²)
Marker Frequency Counter			
Accuracy	± (marker frequency x fre	quency reference accuracy + 0.100	Hz)
Delta counter accuracy		Jency reference accuracy + 0.141 Hz	
Counter resolution	0.001 Hz		
Frequency Span (FFT and Swept Mode)			
Range	0 Hz (zero span), 10 Hz to	maximum frequency of instrument	
Resolution	2 Hz		
Accuracy Swept FFT	± (0.1% x span + horizont ± (0.1% x span + horizont		

The exact maximum frequency for Option 590 depends on the analysis bandwidth option chosen: Max frequency = (90 - 1/2x (analysis bandwidth in GHz))
 Horizontal resolution is span/(sweep point-1)
 Nominal for Input 2 above 50 GHz

Frequency and Time Specifications (continued)

Sweep Time And Triggering

Sweep Time And Triggering		
Range	Span = 0 Hz	1 μs to 6000 s, nominal
	Span ≥ 10 Hz	1 ms to 4000 s, nominal
Accuracy	Span ≥ 10 Hz, swept	± 0.01%, nominal
	Span ≥ 10 Hz, FFT	± 40%, nominal
	Span = 0 Hz	± 0.01%, nominal
Sweep trigger	Free run, line, video, external 1, external 2, RF bu	ırst, periodic timer
Trigger delay	Span = 0 Hz or FFT	–150 to +500 ms
	Span ≥ 10 Hz, swept	0 to 500 ms
	Resolution	0.1 μs
Time Gating		
Gate methods	Gated LO; gated video; gated FFT	
Gate length range (except method = FFT)	1 µs to 5.0 s	
Gate delay range	0 to 100.0 s	
Gate delay jitter	33.3 ns p-p, nominal	
Sweep (Trace) Point Range		
All spans	1 to 100,001	
Resolution Bandwidth (RBW)		
Range (–3.01 dB bandwidth)		
Standard	1 Hz to 3 MHz (10% steps), 4, 5, 6, 8 MHz	
With Option H1G and Option RBE	10, 15, 20, 25, 30, 40, 50, 60, 70, 80, 100, 133, 1	50, 200, and 212 MHz, in Spectrum Analyzer mode
	and zero span	
Bandwidth accuracy (power)		
RBW range	1 Hz to 100 kHz	± 0.5% (± 0.022 dB)
	110 kHz to 1.0 MHz (CF < 3.6 GHz)	± 1.0% (± 0.044 dB)
	1.1 to 2 MHz (CF < 3.6 GHz)	± 0.07 dB, nominal
	2.2 to 3 MHz (CF < 3.6 GHz)	± 0.10 dB, nominal
	4 to 8 MHz (CF < 3.6 GHz)	± 0.20 dB, nominal
Bandwidth accuracy (–3.01 dB)		
RBW range	1 Hz to 1.3 MHz	± 2% nominal
Selectivity (-60 dB/-3 dB)		4.1:1 nominal
EMI bandwidth (CISPR compliant)	200 Hz, 9 kHz, 120 kHz, 1 MHz	(Option EMC required, qualified for Input 1 only)
EMI bandwidth (MIL STD 461E compliant)	10 Hz, 100 Hz, 1 kHz, 10 kHz, 100 kHz, 1 MHz	(Option EMC required, qualified for Input 1 only)
Analysis Bandwidth ¹		
Maximum bandwidth	Option B25 (standard)	25 MHz
	Option B40	40 MHz
	Option H1G	1 GHz (Automatically includes 255 MHz IF
		hardware (Option B2X))
Video Bandwidth (VBW)		
Range	1 Hz to 3 MHz (10% steps), 4, 5, 6, 8 MHz, and w	ide open (labeled 50 MHz)
Accuracy	± 6%, nominal (in swept mode and zero span)	

1. Analysis bandwidth is the instantaneous bandwidth available around a center frequency over which the input signal can be digitized for further analysis or processing in the time, frequency, or modulation domain.

Amplitude Accuracy and Range Specifications

Amplitude Range	Input	Input 2 (≤ 50 GHz)	Input 2 (> 50 GHz)
Measurement range			
Preamp Off	DANL ¹ to +30 dBm	DANL ¹ to +30 dBm nominal	DANL ¹ to +10 dBm nominal
Preamp On (Option P50)	DANL ¹ to +20 dBm	DANL ¹ to +20 dBm nominal	DANL ¹ to +10 dBm nominal
Input Attenuators (Standard)			
Attenuation range			
Mech Atten (Frequency: 2 Hz to 50 GHz)	0 to 70 dB, in 2 dB steps	0 to 70 dB, in 2 dB steps	NA
Full Range Atten (Frequency: 2 Hz to 110 GHz)	NA	0/6/14/20 dB, fixed steps	0/6/14/20 dB, fixed steps
Electronic Attenuator (Opt EA3)			
Attenuation range (Frequency: 2 Hz to 3.6 GHz)	0 to 2	24 dB, in 1 dB steps	NA
Maximum Safe Input Level	Input	Input 2	
Average total power (with or without preamp)			
Input 1 frequency ≤ 50 GHz	+30 dBm (1 W)	NA	
Input 2 frequency ≤ 40 GHz	NA	+25 dBm (0.32 W) nominal	For all attenuator settings
Input 2 frequency > 40 GHz	NA	+25 dBm (0.32 W) nominal	Full range atten setting = 20 dB
Input 2 frequency > 40 to ≤ 65 GHz	NA	+13 dBm (0.02 W) nominal	Full range atten setting = 0 dB
Input 2 frequency > 65 GHz	NA	+5 dBm (0.003 W) nominal	Full range atten setting = 0 dB
Peak pulse power			
(< 10 µs pulse width, < 1% duty cycle, and	+50 dBm (100 W)	NA	
≥ 30 dB input attenuation)			
DC volts	± 0.2 Vdc	± 0.2 Vdc	
Display Range			
Log scale	0.1 to	1 dB/division in 0.1 dB steps	
-	1 to 20	dB/division in 1 dB steps (10 display	divisions)
Linear scale	10 divis	sions	
Scale units	dBm, d	BmV, dBμV, dBmA, dBμA, V, W, A

	26.4 to 34.5 GHz	± 2.04 dB	± 0.76 dB	± 3.87 dB	± 1.73 dB
	34.4 to 45 GHz	± 2.56 dB	± 1.12 dB	± 4.72 dB	± 1.62 dB
	45 to 50 GHz	± 2.56 dB	± 1.12 dB	± 6.15 dB	± 2.62 dB

1. Preamp Frequency Response is measured in the factory using the 46 dB attenuation setting, 0.25 dB of guardband is reserved for performance as measured in the specified 0 dB Input attenuation setting

LNP refers to the low noise path in the N9041B UXA signal analyzer, for frequency range from 3.5 to 50 GHz. The LNP bypasses the assembly containing the internal preamplifiers, reduces the signal path losses, and results in improved DANL and SHI performance of the analyzer.

LNP is a standard feature for the N9041B UXA signal analyzer. LNP cannot operate simultaneously with preamplifiers

3. Full Range Atten is set to any setting of 0, 6, 14, or 20 dB. Software preselection set to Enabled or Disabled

Amplitude Accuracy and Range Specifications (continued)

Input Attenuation Switching Uncertainty		Input 1	Input 2
Relative to 10 dB attenuation and preamp of	off		
At 50 MHz (reference frequency)	Attenuation 12 to 40 dB	± 0.14 dB, ± 0.04 dB typical	± 0.04 dB, nominal

 The ADC clipping level declines at low frequencies (below 50 MHz) when the LO feedthrough (the signal that appears at 0 Hz) is within 5 times the prefilter bandwidth (see table) and must be handled by the ADC. For example, with a 300 kHz RBW and prefilter bandwidth at 966 kHz, the clipping level declines for signal frequencies below 4.83 MHz. For signal frequencies below 2.5 times the prefilter bandwidth, there will be additional reduction due to the presence of the image signal (the signal that appears at the negative of the input signal frequency) at the ADC.

Displayed Average Noise Level (Preamp On)

Input terminated, sample or average detector, average type = Log, 0 dB input attenuation, IF gain = High, 1 Hz RBW, 20 to 30 °C

	10 MHz		-155 dBc/Hz, -157 dBc/Hz, typical		-157 dBc/Hz, nominal	

1. For wide reference loop bandwidth.

2. Keysight measures 100% of the signal analyzers for Input 1 phase noise at 10 Hz offset from a 1 GHz carrier in the factory production process. This measurement requires a signal of exceptionally low phase noise that is characterized with specialized processes. It is impractical for field and customer use. Because field verification is impractical, Keysight only gives a typical result. More than 80% of prototype instruments met this "typical" specification; the factory test line limit is set commensurate with an on-going 80% yield to this typical. Like all typical specifications, there is no guardbanding for measurement uncertainty. The factory test line limit is consistent with a warranted specification of -89 dBc/Hz.

General Specifications

Temperature range

Operating Storage

Altitude

4,500 meters (approx. 15,000 feet)

0 to 40 °C -40 to +70 °C

EMC

Complies with the essential requirements of the European EMC Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61326-1
- CISPR 11, Group 1, Class A
- AS/NZS CISPR 11
- ICES/NMB-001

This ISM device complies with Canadian ICES-001. Cet appareil ISM est conforme a la norme NMB-001 du Canada.

South Korean Class A EMC declaration

This equipment has been conformity assessed for use in business environments. In a residential environment this equipment may cause radio interference. **X** This EMC statement applies to the equipment only for use in business environment.

사용자 안내문

이 기기는 업무용 환경에서 사용할 목적으로 적합성 평가를 받은 기기로서 가정용 환경에서 사용하는 경우 전파간섭의 우려가 있습니다.

※ 사용자 안내문은 "업무용 방송통신기자재"에만 적용한다.

Safety

Complies with the essential requirements of the European Low Voltage Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61010-1
- Canada: CSA C22.2 No. 61010-1
- USA: UL std no. 61010-1

Acoustic Statement (European Machinery Directive)

Acoustic noise emission LpA < 70 dB Operator position Normal operation mode per ISO 7779

Environmental Stress

Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MILPRF-28800F Class 3.

Power Requirements

Voltage and frequency	100/120 V, 50/60/400 Hz 220/240 V, 50/60 Hz	The instruments can operate with mains supply voltage fluctuations up to \pm 10% of the nominal voltage
Power consumption On Standby	850 W (Maximum) ¹ 25 W	

1. The actual power consumption depends on the configuration of the instrument. For example, power consumption of an N9041B with Option H1G installed is nominally 565W.

General Specifications (continued)

IF output	
Connector	SMA female, shared by second IF Out (option CR3, standard) and Options CRP and ALV, labeled as
	"Aux IF Out"
Impedance	50 Ω nominal
2nd IF output	
Center frequency	
SA mode or I/Q analyzer with IF BW $\leq 25~{\rm MHz}$	
with Option B40	250 MHz
with Option B2X	750 MHz (automatically included in Option H1G) 750 MHz
with Option H1G Conversion gain	1 dB nominal
Bandwidth	i ud nominal
Low band	
IF Path ≤ 40 MHz	Up to 160 MHz nominal
IF Path 255 MHz	255 MHz nominal
IF Path 1 GHz	1 GHz nominal
High band, with preselector bypassed	Up to 800 MHz (nominal); expandable to 1200 MHz with corrections
IF2 output (Option H1G)	
Connector	SMA female Labeled as "IF2 OUT"
Impedance Center frequency	50 Ω nominal 750 MHz
Trigger 3 input for 1 GHz digitizer (Option H1G) Connector	BNC female
Impedance	50 Ω, DC terminated
Trigger level range	± 5 V range (minimum amplitude 0.5 V pk-pk)
Trigger channel passband	
Irinner channel nasshand	DC to 2 GHz nominal

Other Optional Outputs, Rear Panel

Option ALV log video out

General Port Specifications		
Connector Impedance	SMA female 50 Ω nominal	Shared with Options CR3/CRP, labeled as "AUX IF OUT"
Fast Log Video Output		
Output voltage	Open-circuit voltages shown	
Maximum	1.6 V at –10 dBm nominal	
Slope	25 ± 1 mV/dB nominal	
Log fidelity		
Range	49 dB (nominal) with input frequency at 1 GHz	
Accuracy within range	± 1.0 dB nominal	
Rise time	15 ns nominal	
Fall time		
Bands 1-4 with Option MPB	40 ns nominal best case	
Other cases	Depends on bandwidth	

Option CRP programmable IF output

General Port Specifications		
Connector Impedance	SMA female 50 Ω nominal	Shared with Options CR3/ALV, labeled as "AUX IF OUT"
Programmable IF Output		
Center frequency		
Range	10 to 75 MHz (user selectable)	
Resolution	0.5 MHz	
Conversion gain	–1 to +4 dB (nominal) plus RF frequency	y response
Bandwidth		
Output at 70 MHz		
Low band or high band with preselector bypassed	100 MHz (nominal)	
Preselected band	Depends on RF center frequency	
Lower output frequencies	Subject to folding	
Residual output signals	≤ –88 dBm (nominal)	

Option CRW IF output, ultra-wide bandwidth¹

General Port Specifications		
Connector Impedance	SMA female 50 Ω nominal	Labeled as "EXT IF OUT"
IF Output, Ultra-Wide Bandwidth		
Center frequency Bandwidth	5 GHz Up to 9.6 GHz	
IF flatness At -4.8 GHz from center of IF bandwidth At +4.8 GHz from center of IF bandwidth	+2 dB nominal –6 dB nominal	
Conversion gain ²	–8 to –3 dB (nominal)	

For input frequency > 50 GHz only.
 At the IF center frequency of 5 GHz

Other Optional Outputs (continued)

Option YAV Y-axis video output

General port specifications		
Connector Impedance	BNC female	Shared with other options 50Ω nominal
Screen video		
Operating conditions		
Display scale types	Log or Lin	"Lin" is linear in voltage
Log scales	All (0.1 to 20 dB/div)	
Modes	Spectrum analyzer only	
Gating	Gating must be off	
Output scaling	0 to 1.0 V open circuit, representing bottom to top	of screen
Offset	± 1% of full scale nominal	
Gain accuracy	\pm 1% of output voltage nominal	
Log video (Log envelope) output		
Amplitude range (terminated with 50 Ω)		
Maximum	1.0 V nominal for –10 dBm at the mixer	
Scale factor	1 V per 192.66 dB	
Bandwidth	Set by RBW	
Operating conditions	Select Sweep Type = Swept	
Linear video output		
Amplitude range (terminated with 50 Ω)		
Maximum	1.0 V nominal for signal envelope at the reference I	level
Minimum	0 V	
Scale factor	If carrier level is set to half the reference level in vo	olts, the scale factor is 200% of carrier level per volt.
	Regardless of the carrier level, the scale factor is 1	100% of reference level per volt.
Bandwidth	Set by RBW	
Operating conditions	Select Sweep Type = Swept

1. In the 1 GHz bandwidth path, the span and bandwidth will be 40 MHz minimum. Below 40 MHz, a narrower IF path is used.

2. 3.

Signal Level is -11 dB relative to full scale at the center frequency. The residual performance is dominated by a single residual 50 MHz to the left of the center of the screen. It is an artifact of the ADC architecture. If residual performance is critical and span requirements are flexible, then reducing the span to 255 MHz and making use of the 255 MHz IF path will eliminate this residual.

Option H1G 1 GHz analysis bandwidth (continued)

		Input 1	Input 2
Spurious responses			
LO-related spurious responses			
(Offset from carrier 300 Hz to 10 MHz ¹ , mixer	level -10 dBm)	-72 dBc ² +20 x log(N ³), nominal	Same as Input 1
Close-in sidebands			
(LO-related, offset <300 Hz, mixer level -10 d	Bm)	-60 dBc ² +20 x log(N ³), nominal	Same as Input 1
Data Acquisition, 1 GHz IF path (Option H1G)			
Time record length			
Analysis tool			
IQ analyzer	8,000,000 sample pairs	Waveform m	easurement
Advanced tool	32-bit data packing	With 89600	VSA or fast capture
IF bandwidth	Length (IQ sample pairs)		
1 GHz ≥ IFBW > 40 MHz	838,859,979 to 419,429,990		
Maximum IQ capture time (advanced tools)	Length of IQ sample pairs/Sample ra	te (IQ pairs)	
Sample rate (IQ pairs)	Minimum of (1.25 x IFBW, 300 Msa/s		
ADC resolution	12 bits		

1. A noteworthy group of harmonically related sidebands is often present with a level of nominally -80 dBc at 300 Hz and envelope falling off (30 dB/decade) A floteworthy group of harmonically related sidebands is often present intra a creater menually of the term with increasing offsets.
 Nominally -40 dBc under large magnetic (0.38 Gauss rms) or vibrational (0.21 g rms) environmental stimuli.
 N is the LO multiplication factor. Refer to page 3 for the N value verses frequency ranges.

Real-time Spectrum Analyzer (RTSA)

Option RT1 real-time spectrum analyzer, basic detection, or RT2 real-time spectrum analyzer, optimal detection

Real-time analysis Real-time analysis bandwidth Option RT1 Up to 255 MHz Analysis BW option determines the max real-time BW Option RT2 Up to 255 MHz (max 255 MHz with H1G) Minimum detectable signal duration with > 60 dB StM¹ ratio For Frequency Mask Triggering (FMT) Option RT1 11.42 ns Option RT2 3.33 ns Signal is at mask level Minimum signal duration with 100% probability of intercept (POI) at full Signal is at mask level, span > 85 MHz amplitude accuracy Option RT1 17.17 µs Option RT2 3.51 µs 100 µs Minimum acquisition time FFT rate 292,969/s Supported Detectors Peak, Negative Peak, Sample, Average Number of Traces 6 Number of Markers 12 Supported Markers Normal, Delta, Noise, Band Power Supported triggers Level, Level with Time Qualified (TQT), Line, External, RF burst, Frame, Frequency Mask (FMT), FMT with TQT

1. "StM" = "Signal-to-Mask"
