Keysight P940xA/C
Solid State PIN Diode Switches
P9402A 100 MHz to 8 GHz SPDT PIN switch P9402C 100 MHz to 18 GHz SPDT PIN switch P9404A 100 MHz to 8 GHz SP4T PIN switch P9404C 100 MHz to 18 GHz SP4T PIN switch

## Technical Overview

## Key Features

- Dramatically increase throughput with ultra fast switching speed of < 450 ns
- Reduce test system set up costs with the long switching life
- Minimize cross-talk with exceptionally high port-to-port isolation of > 80 dB
- Optimize your system dynamic range with low insertion loss switches, 2.5 dB at 4 GHz , SP4T

## Description

The Keysight Technologies, Inc. P940xA/C absorptive solid state switches, based on PIN diode technology, provide superior performance in terms of isolation, insertion loss and return loss across a broad operating frequency range. The P940xA/C are particularly suitable for high-speed RF and microwave switching applications in instrumentation, communication, radar, switch matrices as well as many other test systems.

The P9402A/C switches have a SPDT PIN diode individual control switch IC and discrete shunt pin diodes on the RF path. The discrete shunt pin diodes enhance the isolation between ports. The switch's individual control pin controls the port between the ON and OFF state. With these features, the switch provides good port match even when it is off. Hence, this SPDT switch has three switching states, switching between the common port and port 1 or port 2 or all ports Off.

The P9404A/C switches have a SP4T PIN diode switch IC and discrete shunt pin diodes on the RF path. The P9404A/C SP4T switches have five switching states, switching between the common port to any one of the 4 output ports or, all ports to the OFF state (terminated at 50 Ohm).

## Application

Solid state switches can be used in a large number of applications, increasing system flexibility and simplifying system design. They are preferred in testt systems where speed is critical.

Filter bank
Figure 1. Filter bank test setup

The figure above shows a typical test setup for filter bank testing. Two SP4T absorptive PIN switches are needed for the S parameter measurement with ENA. Mobile handset and semiconductor manufacturers use PIN switches because fast switching speeds are needed for high volume testing of filters e.g. SAW filters. P940xA/C are particularly suitable for the application due to two reasons; the low insertion loss optimizes the dynamic range, and TTL control enables the switches to be controlled easily, using +5 V or OV .

## Specifications

Specifications refer to the performance standards or limits against which the solid state switches are tested.
Typical characteristics are included for additional information only and they are not specifications. These are denoted as
"typical", "nominal" or "approximate" and are printed in italic.

RF Specifications
SPDT

| Model | P9402A | P9402C |
| :--- | :--- | :--- |
| Frequency range | 100 MHz to 8 GHz | 100 MHz to 18 GHz |
| Insertion loss | $<2.5 \mathrm{~dB}(100 \mathrm{MHz}$ to 4 GHz$)$ | $<3.5 \mathrm{~dB}(100 \mathrm{MHz}$ to 8 GHz$)$ |
|  | $<3.2 \mathrm{~dB} \mathrm{(4GHz} \mathrm{to} \mathrm{8GHz)}$ | $<4 \mathrm{~dB}(8 \mathrm{GHz}$ to 18 GHz$)$ |
| Isolation | 80 dB | 80 dB |
| Return loss (ON \& Common Port) | $>15 \mathrm{~dB}$ | $>10 \mathrm{~dB}$ |
| Return loss (OFF Port) | $>15 \mathrm{~dB}$ | $>10 \mathrm{~dB}$ |
| Switching speed rise/fall | 380 ns (typical) | 380 ns (typical) |
| Video leakage | $3400 \mathrm{mVpp}($ typical $)$ | $3400 \mathrm{mVpp}($ typical) |
| Characteristic impedance | $50 \Omega$ (nominal) | $50 \Omega$ (nominal) |
| Connectors | SMA (f) | SMA (f) |

1. Switching speed is based on $50 \%$ TTL to $90 \%$ RF.

SP4T

| Model | P9404A | P9404C |
| :--- | :--- | :--- |
| Frequency range | 100 MHz to 8 GHz | 100 MHz to 18 GHz |
| Insertion loss | $<2.5 \mathrm{~dB}(100 \mathrm{MHz}$ to 4 GHz$)$ | $<3.5 \mathrm{~dB}(100 \mathrm{MHz}$ to 8 GHz$)$ |
|  | $<3.5 \mathrm{~dB}(4 \mathrm{GHz}$ to 8 GHz$)$ | $<4.5 \mathrm{~dB}(8 \mathrm{GHz}$ to 18 GHz$)$ |
| Isolation | 80 dB | 80 dB |
| Return loss (ON \& Common Port) | $>15 \mathrm{~dB}$ | $>10 \mathrm{~dB}$ |
| Return loss (OFF Port) | $>15 \mathrm{~dB}$ | $>10 \mathrm{~dB}$ |
| Switching speed rise/fall |  | 450 ns (typical) |
| Video leakage | $2800 \mathrm{mVpp}($ typical $)$ | 2800 mV (typical) (typical) |
| Characteristic impedance | $50 \Omega$ (nominal) | $50 \Omega$ (nominal) |
| Connectors | $S M A ~(f)$ | $S M A(f)$ |

## Environmental Specifications

The P940xA/C PIN diode switches are designed to fully comply with Keysight product operating environment specifications. The following summarizes the environmental specifications for these products.

## Temperature

Operating $-55^{\circ} \mathrm{C}$ to $+95^{\circ} \mathrm{C}$
Storage $-65^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$
Cycling $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}, 10$ cycles @ $20^{\circ} \mathrm{C}$ per minute,
20 minutes dwell time per MIL-STD-833F, Method 1010.8,
Condition C (modified)

## Humidity

Operating 50\% to $95 \%$ RH @ $40^{\circ} \mathrm{C}$, one 24 hour cycle, repeated 5 times
Storage < 90\% RH @ $65^{\circ} \mathrm{C}$ for 24 hours
Mechanical Dimensions

Dimensions in millimeters and inches.
